

# Hylas 2 - freedomsat 98cm Dish Setup Guide

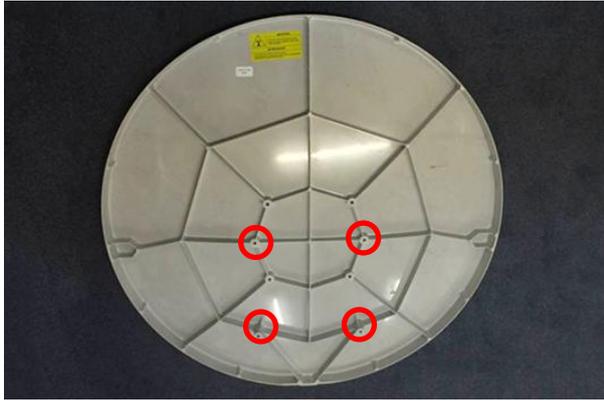

The below packages are representative of what you will be receiving.

1 x 98cm dish (with arms)

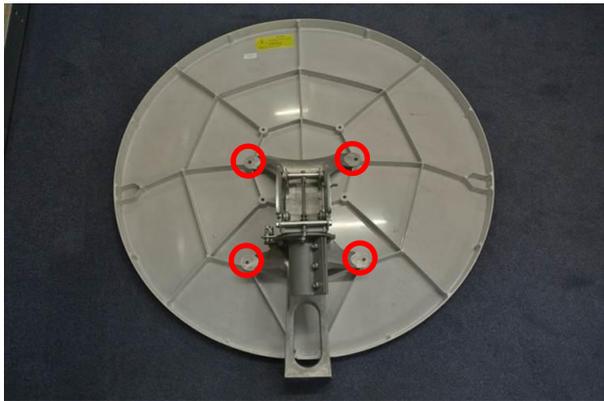

1 x Dish mount

1 x TRIA (transmit and receive)

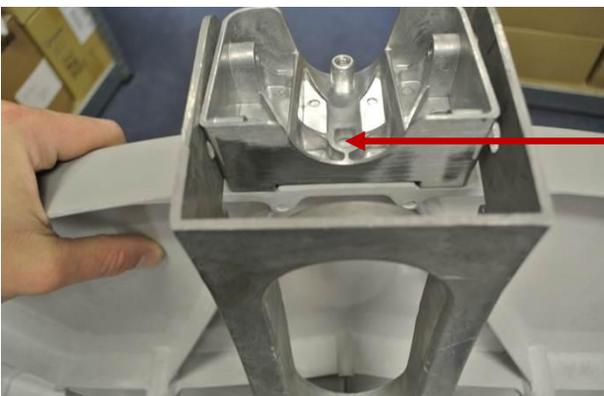

- Place the dish face down.
- Identify the screw holes. (Circled in red on the photograph)

- Remove the mount from the box
- Align the screws with Dish

Once screwed in it should look like this...

- Place main arm mount on top of dish.
- Align screws with holes going through both main mount and main arm mount
- Screw until tight

Identify main arm  
Place screws through arm, main  
arm mount and dish

Underside view of screw through  
arm, main arm and dish.

Smaller arms attach to far end  
of the main arm, both using the  
same bolt.  
Both smaller arms attach to  
outside rim of the dish

Screws attach on the  
outside and inside of  
dish

The connecting smaller arms to the dish should look like this

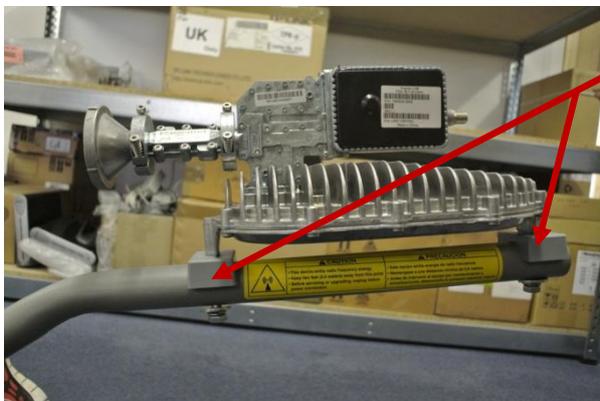

The dish face is placed upside down to help assembler to attach arms

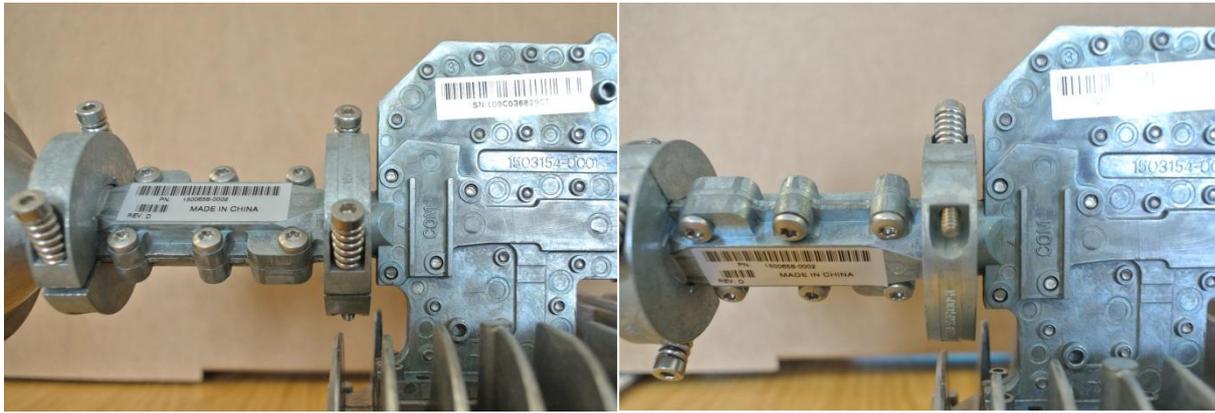

This closer view shows the smaller arms connected to the main arm

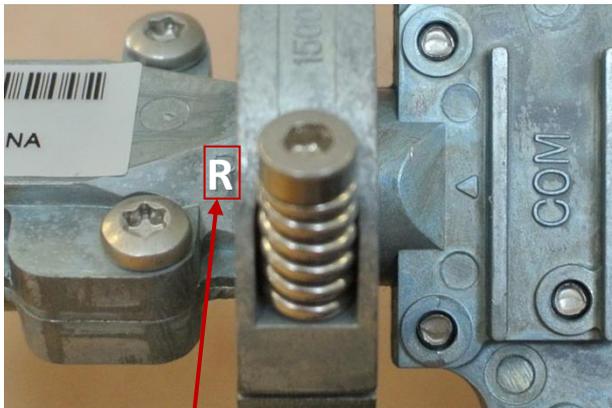

Identify the end of the main arm  
Next unbox the head/TRIA

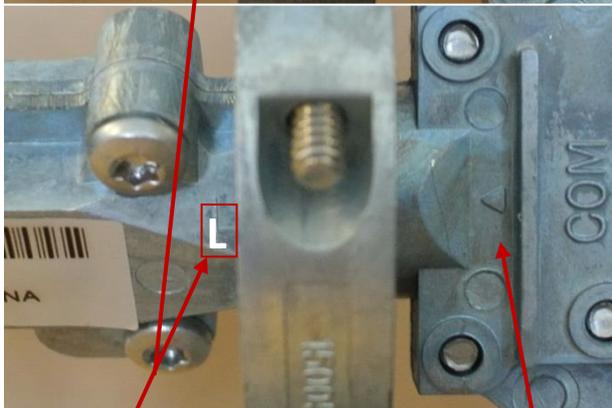

- Place the plastic supports on top of the main arm
- Place TRIA on top on the top of the plastic supports
- Tighten screws

Changing the polarisation – By default the kit sent to you will be set for right hand polarisation (left photograph)

In the upper photo the TRIA is set to Right Hand polarisation (RHCP)

In the lower, this is set to Left Hand Polarisation (LHCP)

These two positions are changed by rotating the front part attached to the feedhorn and aligning the L (for left hand) or R (for Right hand) polarisation with the arrow on the right side of these photos.
